Insurance: Mathematics and Economics 6 (1987) 295
North-Holland

Author Index Volume 6 (1987)

(The issue number is given in parentheses)

Beekman, J.A. and **C.P. Fuelling**, A collective risk comparative study (1) 57– 62
Beekman, J.A., see **G. Meyers** (4) 267–274
Beirlant, J. and **S.T. Rachev**, The problem of stability in insurance mathematics (3) 179–188
Boogaert, P. and **V. Crijns**, Upperbounds on ruin probabilities in case of negative loadings and positive interest rates (3) 221–232
Chan, F.Y., Symbolic computing (3) 203–212
Crijns, V., see **P. Boogaert** (3) 221–232
Delbaen, F. and **J. Haezendonck**, Classical risk theory in an economic environment (2) 85–116
Doherty, N.A., Retroactive price regulation and the the fair rate of return (2) 135–144
El-Habashi, M.H., see **A.M. Nigm** (4) 237–244
Fuelling, C.P., see **J.A. Beekman** (1) 57– 62
Gerber, H.U., see **A. Valderrama Ospina** (1) 63– 64
Goovaerts, M.J., see **A.E. van Heerwaarden** (4) 289–293
Goovaerts, M.J., see **R. Kaas** (1) 33– 42
Goovaerts, M.J. and **G.C. Taylor**, Premium rating under non-exponential utility (4) 245–257
Haezendonck, J., see **F. Delbaen** (2) 85–116
Hamdy, H.J., see **A.M. Nigm** (4) 237–244
Heilmann, W.-R. and **K. Schröter**, On the robustness of premium principles (2) 145–149
Hürlimann, W., A numerical approach to utility functions in risk theory (1) 19– 31
Kaas, R., see **A.E. van Heerwaarden** (4) 289–293
Kaas, R. and **M.J. Goovaerts**, On the use of QUADPACK for the calculation of risk theoretical quantities (1) 33– 42
Kaminsky, K.S., Prediction of IBNR claim counts by modelling the distribution of report lags (2) 151–159
McCrae, M. and **M. Tippett**, Estimating rates of return on Australian superannuation funds (3) 213–220
Meyers, G. and **J.A. Beekman**, An improvement to the convolution method of calculating $\psi(u)$ (4) 267–274
Nigm, A.M., M.H. El-Habashi and **H.I. Hamdy**, The effect of risk parameters on decision making (4) 237–244
O'Brien, T., A two-parameter family of pension contribution functions and stochastic optimization (2) 129–134
Panjer, H.H., see **G.E. Wilmott** (1) 43– 56
Rachev, S.T., see **J. Beirlant** (3) 179–188
Schröter, K., see **W.-R. Heilmann** (2) 145–149
Sharp, K.P., A model for determining early retirement incentives (2) 117–127
Shiu, E.S.W., Matrix derivation of moving-weighted-average graduation formulas (1) 1– 6
Shiu, E.S.W., On the Fisher–Weil immunization theorem (4) 259–266
Sundt, B., Credibility and old estimates (3) 189–194
Taylor, G.C., Balancing an insurance portfolio by class of business (1) 7– 18
Taylor, G.C., Expenses and underwriting strategy in competition (4) 275–287
Taylor, G.C., see **M.J. Goovaerts** (4) 245–257
Teugels, J.L. and **G. Willmot**, Approximations for stop-loss premiums (3) 195–202
Tippett, M., see **M. McCrae** (3) 213–220
Valderrama Ospina, A. and **H.U. Gerber**, A simple proof of Feller's characterization of the compound Poisson distributions (1) 63– 64
Van Heerwaarden, A.E., R. Kaas and **M.J. Goovaerts**, New upper bounds for stop-loss premiums for the individual model (4) 289–293
Wilkie, A.D., Stochastic investment models – theory and applications (1) 65– 83
Willmot, G., see **J.L. Teugels** (3) 195–202
Willmot, G.E. and **H.H. Panjer**, Difference equation approaches in evaluation of compound distributions (1) 43– 56
Zecchin, M., Calculation of the maximum retentions in XL reinsurance (3) 169–178
